

Airbnb Clone — Features Documentation

Stack assumption: ASP.NET Core MVC (Razor Views + Identity + EF Core).

MVP

Auth & Users

- Register/Login via ASP.NET Core Identity
- One account can act as Guest and/or Host (`IsHost` flag — no separate roles needed)
- Edit profile (name, bio, photo)

Listings (Host)

- Create / Edit / Deactivate listing (title, description, address, price/night, max guests, beds/baths)
- Upload photos
- View own listings

Search & Browse (Guest)

- Browse active listings
- Filter: city, check-in/out dates, guests, price range
- Listing details page (photos, description, amenities, host info, price)

Booking

- Guest requests booking for a date range
- Status flow: Pending → Confirmed/Rejected → Completed / Cancelled (host confirms manually — no payment gateway)
- Date-overlap check to prevent double booking
- Guest: "My Trips"; Host: "Booking requests"

Reviews

- Guest rates (1–5) + comments after a Completed booking
- Average rating shown on listing page

Optional (to make it “full”)

Feature	Notes
Payments	Stripe/PayPal checkout in the booking flow, payment history
Messaging	Host ↔ Guest inbox tied to a listing/booking
Wishlist/Favorites	Guest saves listings
Advanced search	Map view, amenity filters, instant-book
